RIGGING INFORMATION

■ Rigging Policies

- Hard hats are required on the event floor while there are riggers working on the grid.
- All production rigging done in the PBA must be attached to the rigging grid. Any rigging outside of the grid will need to have engineering approval and will include additional charges.
- A scaled rigging plot needs be submitted to the arena no later than 14 days prior to load in. The rigging plot must include calculated weight per point. The PBA may install load-monitoring equipment on any rigging point hung in the arena to verify loads. Any on-site deviation from the submitted plot will need additional approval.
- Heavier productions will require a higher level of oversight to ensure that they are rigged within the rigging grid capacities. See Rigging Grid Capacities for more details. There may be additional charges.
- The IATSE Local 151 is the arena rigging labor provider. All rigging on the grid must be performed through the contract with Local 151. See Rigging Procedures for further details about attaching to the grid.
- All chain hoists used overhead must adhere to the ASME B30.16 standards.
- All truss used overhead must adhere to the ANSI E1.2 standards
- All hardware used to support equipment overhead must be rated and used appropriately.

■ Rigging Procedures

Up riggers gear requirements:

- ANSI Z359.1 harness
 - dual safety lanyard
 - gloves
 - appropriate length rope
 - locking shiv
 - appropriate shoes
- All up riggers must have a thorough understanding of the horizontal safety system and the safe and correct use of the components of the system.
 - No bridle attachment can be shallower than 45°.
 - "Free rappelling" is not allowed from anywhere in the arena. Use of a rappel to gain access must be used as an absolute last resort and must be done with properly rated equipment and anchorage. A secondary safety system (vertical life line or belay) is required for all rappels.
 - Rescue equipment for the horizontal life line system will be available and regularly inspected. All up-rigging crews will have at least one person trained on the operation and location of the rescue equipment.
 - Solo beam access is not allowed. Any up-rigger working on the rigging grid must have at least one other up-rigger working with them.
